

Appropriate project planning and management at the start and during the course of the project are critical elements of any successful project whether small or large. Environmental Geology Services, Inc. begins the project planning process during development of the project's Scope of Work and while preparing the Professional Services Agreement. In this initial stage we take the time to learn as much as possible about our Clients' project needs including budget objectives, scheduling requirements, third party issues such as tenant concerns, regulatory requirements, and other factors that are unique to each project and Client.

Our years of experience have shown that close coordination and ongoing communications with our Clients, as well a regulatory agency personnel, at the start of the project through finalization of work is the best approach. EGS' professional planning and management approach has proven to result in projects completed on time and on budget.
