

Mr. David Bush who had a B.S. degree in Geography and Environmental Science began working for EGS in 2001 as a Geologic Assistant. Since that time Mr. Bush developed increasing levels of experience and responsibility on numerous investigations of soil and groundwater contamination, remediation planning and management, active fault investigations, and groundwater resource studies. In the course of his work he has progressed through Staff Geologist and Project Geologist levels of responsibility and earned the California EPA's designation as a Registered Environmental Assessor. To further increase his technical abilities and provide additional value to EGS and our Clients, Mr. Bush entered the Geology program at Sonoma State University and completed his B.A. Degree in Geology in 2007, all while working full time. Upon graduation he passed the State of California's Geologist in Training (GIT) Examination, and after completing the State's additional working requirement of 3 years working in a responsible position as a geologist after receipt of a geology degree, Mr. Bush successfully passed, on his first attempt, the rigorous National Association of State Boards of Geology (ASBOG) examination, as well as the California State Specific Professional Geologist Examination. On June 1, 2012 Mr. Bush received his certification as a Professional Geologist (#8989) in the State of California. We congratulate David for his diligence, technical advancement, and exemplary degree of professionalism. Mr. Bush, our Senior Project Geologist, is an invaluable asset to EGS and our Clients, as well as the geology profession.
