

Environmental Geology Services, Inc. has conducted a number of UST projects for Napa Valley Petroleum's gas stations in the Napa Valley. On this project we coordinated with the Owner, the station manager, and Napa County Department of Environmental Management. After preparing a Work Plan to investigate the source and extent of MTBE throughout the site area, we oversaw the removal and replacement of the UST system and conducted targeted contaminated soil removal. This was followed by verification soil sampling and implementation of a groundwater monitoring program and reporting. EGS provided all GeoTracker Compliance and regulatory technical assistance including establishment of UST Fund Claim, reimbursement request submittals, etc, and obtained case closure for our Client.
