

Environmental Geology Services, Inc. was contracted to prepare **Seismic / Geologic Hazards** and **Hazardous Materials** sections of the EIR for the 2006 Sonoma County General Plan Update. We worked under Prime Contractor Nichols-Berman, and with project team members, Fehr & Peers Associates, transportation / traffic engineers, Questa Engineering, Civil and water resources engineering, Illingworth & Rodkin, acoustical and air quality consultants, and the Environmental Collaborative biologists.

Our Scope of Work included review of current General Plan, research and analysis of post 1989 seismic data, geologic (landslide and erosion) and hazardous materials research and publications, current Hazmat practices, and incorporated these into the new plan. Our work included analysis of impacts of the new information on the General Plan, attendance at public meetings and hearings, analysis and response to public comments and completion of final draft of the EIR sections.
